Google Agent Staffing: six core steps

01
Prepare the data
Clean the workbook once. Keep only advertisers whose budget is above their country's threshold.

02
Forecast demand
Estimate eligible sign-ups for every country and month of 2026, using 2024 and 2025.

03 Core
Build the simulator
Like the Beer Game: take a staffing plan, apply every rule, return cost and revenue.

04 Core
Find the staffing plan
Pick the headcount per country and month with the highest profit, and beat "keep current staff".

05
Test other demand
Re-run the plan with lower and higher sign-ups to check that it still holds.

06
Build the GenAI layer
A manager asks a question. The app runs our model and explains the result in plain words.

Deliver: executed notebook · short report · 3-minute demo video
